*F-Troop got an A+
On July 25, 2019*

A quick course covering fluid separation was given as well as an inspection of the Guapo Crude Fiscalization Site and well sites along the way to Parrylands Field Office

Above, Halliburton representatives explain aspects of sand control and how they plan to gravel pack the wells in Parrylands

Commercial Aspects of the Oil Industry include hearing the pitch of Service Providers.

We enjoyed and learned much from theirs.

They stated their site visit and “sales call” was the best they’ve experienced so far.

Hearing that from professionals who have traveled the world for years meant a lot to the host. We know the presents of the explorers contributed greatly to their expressed feeling.

Enjoying lunch in Parrylands, Laughing and Contemplating where our exploration may take us...

Reflection and Special Appreciations

Hats off to Dr. Tricia Alvarez who pushes the minds of explorers in the petroleum engineering department at UTT.

To the Explorers who followed their professors lead with enthusiasm to seek new horizons.

To the Gentlemen from Halliburton that walked into more than they imagined, and as good sports, adapted to the moment to share more than they planned.

To the New Horizon Team who helped coordinate a lovely day in the oil field from HSE, Administration, and the Chef.
